

Features:

- ✓ Any number of workplaces, patients and documents
- ✓ Runs on a single computer, local network or internet server
- ✓ Actively developed
- ✓ Available in different languages
- ✓ Designed with data safety as highest priority
- ✓ Professional support available
- ✓ Open standards - no vendor lock-in
- ✓ PostgreSQL for rock-solid stability
- ✓ Thoroughly documented
- ✓ Windows, Mac OSX and Linux
- ✓ Free and Open Source Software!
- ✓ Patient-centered record structure

The GNUmed project builds *free, liberated open source* Electronic Medical Record software in multiple languages to assist and improve longitudinal care (specifically in ambulatory settings, i.e. multi-professional practices and clinics).

It is made available at no charge and is capable of running on GNU/Linux, Windows and Mac OSX. Actively developed by a handful of medical doctors and programmers from all over the world, useful to anyone documenting the health of patients, including, but not limited to, *doctors, physical therapists, occupational therapists, acupuncturists, nurses, psychologists and others.*

GNU — General Public License (GPL)

- 1) *Use, copy, modify and redistribute* free software *in any way you wish*
- 2) The Source code is available
- 3) Modified software is also covered by GPL

You own it.

A lot of software is licensed, not sold, even if it is installed on your own computer. So do you have full control over the data in it? How can you be sure? A copy of GNUmed is yours to keep, and so is the source-code. *Work safe and secure, use free software and open standards.*

Build for the future!

Medical records often need to be stored for a long time, but getting data out of old electronic archives can be troublesome and costly. That is why GNUmed stores your data in a well-documented and clear way that it easy to retrieve, even after decades.

No Vendor lock-in.

Because of the open standards used, your own IT-staff will be able to fully manage your database, independent of the GNUmed project.

Need professional support?

Everybody should do what he or she is good at and managing IT is not everyones cup of tea. There are several IT-companies around the globe you can contact for assistance with GNUmed, including the German *Hilbros*.

Patient-centered record structure

GNUmed is designed around the patient, not the provider. Which means several professionals work together to in the same EMR, facilitating collaboration for better care.

Use it, and help improve it!
